As you can see, I'm trying to use the @ sign, which won't work because it thinks that's part of some code. I've tried to escape the @ with the following methods: 2 backslashes (as specified in XTerm by Shift+Ctrl+C) using the quote sign (`) using \ I've also used single quotes ' The only method that works is using ASCII characters by themselves. \X works, because it thinks it's part of an escape sequence, but \a doesn't. A: The only way I could get it to work is by escaping it with a backslash \. printf "hello\a" #prints: hello\a It was a bit of a pain to set up. I had to make sure the shell I'm in is XTERM, as \a is encoded by XTERM but not the default TERM. And then I had to figure out how to get XTERM to pass the \ to the terminal. I added the following to my bashrc: read -s -p 'Enter your password' -e '\c' That tells XTERM to put the cursor at the beginning of the line. The rest of my bashrc was just a bunch of #s to track down some weird things I was doing. [Sub-clavian steal syndrome: case report and literature review]. In a patient with clinically and electrically normal functioning

left arm, the electrocardiogram showed ischaemia of the inferior left arm, without clinical symptoms. The diagnosis of subclavian steal syndrome was confirmed on arteriography showing a retrograde perfusion of the left internal mammary artery to the left arm, without any stenosis. This report emphasizes the importance of knowing the existence of subclavian steal syndrome and of having diagnostic methods in order to avoid irreversible necrosis of the left arm. Gold star hispanics are leaving Obama, even though he promised them he would prevent deportations. Obama is busy trying to save the Supreme Court from his last-minute court packing conspiracy. Politico reports that the Supreme Court, a body that has been working hard to block the president from violating the Constitution, is in a state of turmoil as Obama and Reid conspire to pack the Court for a last minute assault. The Supreme Court is the bulwark against Obama's grab 0cc13bf012

At least: 0606 : 96 Bits SLPB : 27 Bits SLPB : 2 Bits ESR : 15 Bits PLBs : 4 Bits EEC : 8 Bits RTC : 8 Bits TSC : 8 Bits BTL : 16 Bits PSE : 16 Bits BDT : 16 Bits PLBOT : 16 Bits BPT : 16 Bits RST : 16 Bits SWR : 16 Bits SWO : 16 Bits WDA : 16 Bits ISD : 16 Bits The p1530 datasheet says: p1530 features a versatile and robust security mode which provides 128 bits of security including a 256-bit encryption mode and a decryption mode. The security mode is flexible, allowing you to easily enable encryption/decryption through the FACP register. The security mode enables you to encrypt data read and write while enabling the state-saving ability of the RTC security register. Now, from the data sheet (page 11) : The RTC feature allows you to save the device's bootloader, boot image, or any additional information that can be preserved between power-on reset. Saving this information saves valuable time for the system, because firmware and data can be reloaded by simply reprogramming the RTC once the device is powered-on. It seems that the 256 bits encryption can be saved/restored from the RTC. If so, you can use the bios7 bin and bios9 bin download as described here Treatment of major depression in older adults. Geriatric depression is a common and debilitating condition with significant health care, disability, and long-term care costs. There are few randomized controlled trials of pharmacotherapy. In this article, we review the past 10 to 20 years of research and

discuss the future challenges of pharmacotherapy for major depression in older adults. This review is based on a search of the literature in Medline from 1966 to 2001 using the key words geriatrics, depression, agitation, elderly, treatment, pharmacotherapy, selective serotonin reuptake inhibitors, and tricyclic antidepressants. Other sources were identified by a manual review of the literature. From all classes of antidepressants, SSRIs may be the first choice in patients with moderate-to-severe depression who do not have contraindications or have intolerance to tricyclic antidepressants. Nevertheless, clinicians may have to supplement SSRIs with a second or third choice agent (usually a serotonin norepinephrine reuptake inhibitor) or with electro

i have found the path for the bios7 bin /lib/firmware/BCM2708A.bin and the bios9 bin /lib/firmware/BCM2709B.bin, what is the path for the bios9 bin? how do i find that? thanks A: /lib/firmware/bcm2709b-rpi-black-w-bcm2708-sdhost.bin. For RPi2 the files are in the directory: /lib/firmware/bin. Source: Raspbian Wiki I saw this article by Tim Worstall and it made a few things come to mind. To start with, it was the first time I've read the word 'millennial' in a sentence. It has a certain ring to it and a certain sort of naivety in the belief that we

really do know what we want in life. A cynical view of our generation would probably suggest it's nothing more than a bunch of entitled, anti-establishment, anti-everything, white kids trying to muscle their way to the top. I don't think that's it at all. I think the millennials are people who's sense of entitlement started to falter when they hit their 30s or early 40s; the weight of life and responsibility hits home. It's harder to blame our parents for our failures and struggles when your own life has been turned upside down, turned inside out. It's easier to blame the system we were born into, easier to complain about the government, than to do something positive. We've been making excuses for our attitude for a long time. We want the best for our kids and we want our future to be as bright as that of our parents. We've been told we want happiness and that we want to stay in education. You see these common stereotypes portrayed on TV, in the media and in the streets of our towns and cities. All of these people have spent their entire lives proving the stereotypes to be true. They've been told that working hard is the only way to achieve. They've been told that the only way to be happy is to achieve more, to be better than the person in the next car, better than my friend, better than my family. Of course, none of this is true.
